

Additional Informationen for our Tailgate Organizer

Our Tailgate Organizer is an adaptive and flexible MOLLE-system to stow away tools, accessories and utensils in your car.

What is MOLLE?

MOLLE, pronounced "Molly", stands for **MO**dular **L**ightweight **L**oad-carrying **E**quipment. The MOLLE carrying system was developed by the US Army in 1994 and was primarily aimed at improving a soldier's physical carrying capacity, i.e. on backpacks, bags, belts, clothes and combat vests. Since MOLLE immediately produced an impressive improvement in the use of tactical gear, it was quickly and successfully adapted for outdoor and off-road use soon after.

MOLLE consists of various pouches, holders, holsters, bags and cases which can be flexibly and adaptably fixed to so-called PALS. The **P**ouch **A**ttachment **L**adder **S**ystem or PALS is made up from sturdy nylon webbing sown onto a wearable platform (e.g. a combat vest or a backpack) or by inserting a regular arrangement of slits in sturdy fabric. This creates a ladder or grid in which you can attach the individual MOLLE modules. You can weave them in with fasteners and straps. Often the modules themselves already come with built-in straps featuring snap buttons for extra strong hold. There are also various clips, sticks, d-rings or carabiners available that slide quickly in and out of the PALS. The MOLLE system creates very strong connections that can be easily adapted according to the situation or space requirements.
